

Security Report for conorconsole.com

1. jQuery Migrate Enabled

- **Risk:** jQuery Migrate exists to support old plugins/themes. Attackers can target outdated scripts relying on it. Known XSS bugs exist in old plugin code.

2. Missing Security Headers

(confirmed: none are present in HTTP response)

- **Risk:**
- Clickjacking (X-Frame-Options missing).
- SSL stripping (HSTS missing).
- MIME sniffing (nosniff missing).
- Referrer leakage (Referrer-Policy missing).
- Browser feature abuse (Permissions-Policy missing).

3. WordPress XML-RPC

Exposure

- **Risk:** /xmlrpc.php can be used for brute-force login amplification & DDoS.

4. Weak Login Protection (/wp-login.php)

- **Risk:** Brute-force login attempts (very common on Hostinger/WordPress).

5. Outdated Plugins / Themes

Risk

- **Risk:** Old versions (e.g., Site Kit, WooCommerce, Elementor) often contain critical vulnerabilities.

6. No robots.txt Restrictions

- **Risk:** Bots can enumerate sensitive directories (backups, admin, includes).

7. No Backup / Recovery Strategy Mentioned

- Risk: If site is hacked or plugin breaks, no clean restore.
